Appendix A Excel Spreadsheet Data submitted to HDR

## 1.0 INTRODUCTION

The Pappio-Missouri River Board of Directors adopted the Lower Platte River Basin Water Management Plan (LPBWMP), dated October of 2017, on December 14, 2017. As part of the Lower Platte River Basin Coalition, the six other NRDs and the Nebraska Department of Natural Resources also approved the LPBWMP and agreed to cooperatively implement the plan per Interlocal Agreement #3.

The Lower Platte River Basin Water Management Plan recommends numerical limits for allowable new water depletions during the second 5-year increment of the plan (January 1, 2022 through December 31, 2026). The allowable new depletions for the second 5-year increment were divided by subbasin and further by individual NRD as documented in Table 4.2 of the LPBWMP.

The LPBWMP calls for the annual tracking of allowable new depletions beginning July 1, 2016. The first reporting period of the Basinwide Plan first increment, according to Table 5.1, is July 1, 2016 through December 31, 2017. All subsequent reporting years are required on a calendar year basis starting in 2018. This report provides the data collected during the 2023 reporting period for the plan area within the Pappio-Missouri River NRD in accordance with Table 5.2 of the LPBWMP.

## 2.0 2023 DATA COLLECTION

Data collected and reported on water supplies and uses within the P-MRNRD include:

- Certified Irrigated Acres
- Co-mingled Groundwater and Surface Water Uses
- Municipal and Industrial Groundwater Uses
- New Groundwater consumptive uses
- Groundwater Use Transfers
- Water supply well permits granted
- Retirement of groundwater consumptive uses
- Water use flow meter date
- Water banking activities
- Stream flow accretion activities
- Groundwater elevation data
- Stream gage measurements on NRD maintained gages
- NRD regulations/management area activities
- New water depletions
- New data collected or model/study results

### 2.1 CERTIFIED IRRIGATED ACRES

The P-MRNRD has not completed certification of irrigated acres within its Integrated Management Plan (IMP) or LPBWMP area, which includes all areas tributary to the Platte and Elkhorn Rivers (herein after referred to as the “plan area”). This plan area covers approximately 228,000 acres in Sarpy, Douglas and Washington counties. Since 2009, approximately 4,332 new irrigated acres which received a variance from the District under the requirements of LB 483 have been certified.

Initial reporting by landowners to certify irrigated acres within the P-MRNRD IMP area yielded an approximate 75% response rate. As of this report, the P-MRNRD has certified 25,877 irrigated acres (only 2,180 by surface water). The P-MRNRD is proposing to complete the certification of irrigated acres in 2025.

### 2.2 CO-MINGLED GROUNDWATER AND SURFACE WATER USE

No data is collected on co-mingled groundwater and surface water use within the P-MRNRD.

## 2.3 MUNICIPAL AND INDUSTRIAL GROUNDWATER USES

The P-MRNRD has collected annual data on municipal uses within the plan area since 2016. This data is reported only for the municipal wells within our District and would not include Metropolitan Utilities District (MUD), Lincoln, or Fremont wells in adjacent NRDs or counties. Data from commercial or industrial users who have their own individual water supply well is not collected at this time.

### Municipal Annual Water Use

Municipal Well Field	2016 Total Pumped (Ac-ft)	2017 Total Pumped (Ac-ft)	2018 Total Pumped (Ac-ft)	2019 Total Pumped (Ac-ft)	2020 Total Pumped (Ac-ft)	2021 Total Pumped (Ac-ft)	2022 Total Pumped (Ac-ft)	2023 Total Pumped (Ac-ft)
Papillion	4,326.2	4,661.1	4,482.2	4,655.4	5,807.8	5,656.3	5,883.0	6,221.8
Lincoln*	20,451.2	22,115.1	11,866.5	8,246.5	9,007.9	18,561.5	19,753.7	20,544.9
MUD South	38,030.4	27,217.2	31,104.3	36,201.0	35,701.3	30,554.0	33,271.8	43,685.5
MUD West*	8,976.2	12,225.1	10,741.7	9,861.9	12,706.1	14,042.8	13,707.0	12,767.6
Fremont*	4,971.5	4,987.4	5,395.3	5,719.6	7,262.3	7,960.5	8,694.3	8,950.9
Valley	334.4	469.3	506.3	537.3	740.4	713.9	862.1	932.9
Springfield	170.8	183.8	202.3	188.7	232.0	243.0	257.8	274.3
Gretna	1,052.0	1,267.4	1,263.5	1,279.7	1,648.0	1,635.7	1,895.1	2,123.2
Arlington	217.4	231.3	165.8	195.3	269.7	301.2	320.8	290.0
<b>TOTAL</b>	<b>78,530.1</b>	<b>73,357.7</b>	<b>65,727.9</b>	<b>66,885.4</b>	<b>64,667.6</b>	<b>79,668.9</b>	<b>84,645.6</b>	<b>95,791.1</b>

\*Only includes wells in the P-MRNRD

Lincoln and MUD's municipal uses have varied over the last few years not only due to demand, but to ongoing treatment plant maintenance and flooding issues. The net consumptive use of municipal water is not tracked or estimated at this time as return flows to the Platte River tributaries are not reported or estimated. Municipal water pumped by MUD and Papillion would be considered a total consumptive use as it ends up as return flow to the Missouri River.

## 2.4 NEW GROUNDWATER CONSUMPTIVE USES

The P-MRNRD only tracks groundwater consumptive uses as a result of new irrigated acres which receive a variance from the District under the prior requirements of LB 483 and our current IMP. In 2023 there were variances granted for 402.7 new groundwater irrigated acres in the plan area. Any depletions from new irrigated acres are reported in Section 2.14.

New groundwater consumptive uses from high capacity wells used for livestock were permitted in the uplands north of Arlington by the PMRNRD in 2018, but are not accounted for as a consumptive use at this time.

## **2.5 GROUNDWATER USE TRANSFERS**

The P-MRNRD does not review or approve groundwater use transfers at this time. Therefore, no data is available.

## **2.6 WATER SUPPLY WELL PERMITS GRANTED**

The P-MRNRD adopted requirements for well permits for new high capacity wells effective March 1, 2018. Sixteen new high capacity well permits were approved in the Platte River Basin (Plan Area) in 2023. Only four new wells were issued variances to expand or created new irrigated acres. During 2022 there were three wells permitted that were not granted variances. They have now been permitted and can be found in this year's report. One well was issued for Public Water Supply. The last eleven wells were permitted for: replacement irrigation wells without additional consumptive use, OPPD Commercial/Industrial use, large domestic use, lake supply, non-agrarian landscape, and periodic spray tank filling. The four wells issued variances that developed new irrigated areas is documented as new peak season depletions in Section 2.14. A copy of the data provided in the Excel spreadsheet is attached to this report for reference.

## **2.7 RETIREMENT OF GROUNDWATER CONSUMPTIVE USES**

The P-MRNRD does not review or collect information on groundwater use retirements at this time. According to the NDNR Registered Well Database, there were four high capacity decommissioned in 2023 in the P-MRNRD IMP Area. Three of these were classified as irrigation wells and one was classified as a commercial/industrial well. The acres associated with the three irrigation wells are still being serviced by other registered irrigation wells and so the associated acres were not retired.

## **2.8 WATER USE FLOW METER DATA**

The P-MRNRD does not require or collect data from flow meters at this time. Therefore, no data is currently available. Flow meters will be required on all active high capacity wells following March 1, 2025. Prior to that time, the NRD will collect flow meter data from wells that it provides cost-share funding to install the flow meter.

## 2.9 WATER BANKING ACTIVITIES

The P-MRNRD does not operate or maintain any available water banks at this time. Therefore, no data is available.

## 2.10 STREAMFLOW ACCRETION ACTIVITIES

There are no ongoing projects in the P-MRNRD to augment surface water flow or conjunctively manage groundwater and surface water. Ongoing studies relevant to conjunctive management of surface and groundwater between the Platte and Elkhorn Rivers are discussed in Section 2.15.

## 2.11 GROUNDWATER ELEVATION DATA

Groundwater level measurements were collected at 29 locations within the plan area during the spring of 2023. Some sites have been measured since 1978. In general, groundwater levels in late April through May 2023 were 1.58 feet above to 18.18 below their period of record average. Figure 1 displays the depth above or below the running average and the percent rise or decline from the running average for each groundwater level measurement location. This groundwater level data in the IMP area has a standard deviation between 0.48 and 4.19 feet.

The USGS and PMRNRD have been able to collect continuous recording groundwater level data at 5 sites within the plan area, spread across the Platte and Elkhorn River valley between Leshara and Waterloo. Below is the annual data from one of these sites located between the two rivers.

## 2.12 STREAM GAGE MEASUREMENT ON NRD MAINTAINED GAGES

The P-MRNRD does not own or operate any stream gages within our IMP area that are independent of data collected by USGS or NDNR.

## 2.13 NRD REGULATIONS/MANAGEMENT AREA ACTIVITIES

Major updates to the P-MRNRD's Groundwater Management Plan (GMP) and Rules and Regulations were adopted in March 2018. A Phase I Groundwater Quantity Management Area (GMAs) was designated for the entire P-MRNRD on March 1, 2018. New rules which became effective March 1, 2018, and amended July 14, 2022, under the new Phase I GMA designation include:

- Water Supply Well Permits are required for all new high capacity wells (>50 gpm) within the NRD.
- In addition to minimum state requirements, a 600 foot well spacing will be required between any new high capacity well and any other registered water supply well.
- Flow meters will be required within the hydrologically connected area of the IMP by March 1, 2025.

## 2.14 NEW WATER DEPLETIONS

The P-MRNRD requires the issuance of a variance to expand irrigated acres in the hydrologically connected area of our IMP. This data is input into the accounting for estimating depletions as described on page 28 of the LPBWMP.

The P-MRNRD received and approved seven variance applications to expand irrigated acres in the plan area during the reporting period and their peak season depletions are reported in Table 1. The registration of any new wells during this time period was used as check to verify that any new uses actually received a variance.

**Table 1. Peak Season Depletions for High Capacity Wells in the Plan Area (2023)**

Well Permit No.	Acres	NIR (in)	SDF	Peak Season Depletion	Well Status	Location
1023004	121.8	0.55	0.85	31.0	NA	41.353149, -96.282991

1023006	140	0.55	0.39	16.4	NA	41.609196, - 96.334588
1022021	64.42	0.55	0.99	19.1	G-196180	41.192586, - 96.315992
1022022	12.2	0.55	0.99	3.6	G-015600	41.294694, - 96.296139
NA	25.2	0.55	0.94	7.1	G-090366	41.358907, - 96.375192
NA	7.2	0.55	0.95	2.0	G-015658	41.353844, - 96.390086
1023025	31.86	0.55	0.96	9.2	NA	41.351199, - 96.332506

It is the P-MRNRD's understanding that increases of municipal use for municipalities with transfer permits, including MUD and Lincoln, were already accounted for before allowed depletions were calculated. Increases in use by other municipalities or industry will be researched by the Basin Coalition and accounted for after the first increment.

Not including the livestock uses, the balance of allowable new depletion for the P-MRNRD between as of December 31, 2023 is shown in the table below:

Depletion Desc.	Peak Season Depletion (AF)	Balance (AF)
2016 – 2021 PMRNRD Allowable Depletion		869
2016-17 New NRD GW Depletion	1.5	867.5
2016-17 New NDNR SW Depletion	67.3	800.2
2018 New NRD GW Depletion	0.0	800.2
2018 New NDNR SW Depletion	0.0	800.2
2019 New NRD GW Depletion	0.0	800.2
2019 New NDNR SW Depletion	10.0	790.2
2020 New NRD GW Depletion	28.5	761.8
2020 New NDNR SW Depletion	-10.3	772.1
2021 New NRD GW Depletion	4.0	768.1
2021 New NDNR SW Depletion	0.0	772.1
2022 New NRD GW Depletion	14.6	753.5

2022 New NDNR SW Depletion	0.0	753.5
2023 New NRD GW Depletion	88.5	665.0
2023 New NDNR SW Depletion	0.0	665.0
<b>TOTAL Depletion</b>	<b>204.1</b>	<b>665.0</b>

## 2.15 NEW DATA COLLECTED OR MODEL/STUDY RESULTS

The P-MRNRD is engaged in several ongoing studies with other NRDs and agencies within the Lower Platte Basin.

One such study effort is the Lower Platte River Consortium spearheaded by the Lower Platte South NRD in partnership with Lower Platte North NRD, P-MRNRD, City of Lincoln, MUD, and NDNR. The objective of the consortium is to develop a Drought Contingency Plan for the Lower Platte River. See documentation available at: <https://www.lpsnrd.org/draft-drought-plan>.

Another effort is an ongoing USGS study sponsored by the P-MRNRD and Lower Platte North NRD to monitor groundwater and surface water conditions in the combined Platte and Elkhorn River Valley. A final report was issued in 2019 and is available through the USGS publication warehouse at: <https://pubs.er.usgs.gov/publication/sir20195048>.

As of 2020, Airborne Electromagnetic (AEM) survey data has been collected for the entire P-MRNRD IMP area. All AEM reports and data are available at [www.enwra.org](http://www.enwra.org) and are being electronically stored on the [Nebraska GeoCloud](#).

## 3.0 REVISIONS TO THE PLAN

There are no anticipated revisions to the plan at this time. The P-MRNRD will need to document and prepare revisions to its Integrated Management Plan with NDNR in order to incorporate the allowable depletion values per the LPBWMP.

## 4.0 COALITION BUDGET AND MEMBER CONTRIBUTIONS

The P-MRNRD has \$10,000 budgeted for support of the coalition this fiscal year (before July 1, 2024)
